

DR. BRUNO CHIKLY'S

**Brain, Tissue, Nuclei, Fluid
and Autonomic Nervous System
Brain 1 (B1)**

Endless Waves of Healingsm

A Hidden Key to Health and Longevitysm

CHIKLY HEALTH INSTITUTE

Brain 1 (B1): Brain Tissue, Nuclei, Fluid & Autonomic Nervous System

Class Code: B1

The Brain Therapy Curriculum is an advanced-level course that takes us to the next realm of manual therapy. It explores the brain, spinal cord, white matter, grey matter, and also in this level brain nuclei such as corpus callosum, septum pellucidum, indusium griseum, fornix, thalamus, globus pallidus, amygdala, hippocampus, brainstem, cerebellum, etc.

The body often aligns itself around these precise structures, and they are frequently unaddressed key/dominant tissue restrictions.

The techniques presented in this class can probably help most of your patients, but it can specifically help pathologies such as closed-head injuries, whiplash, headaches, dyslexia, cerebral palsy, cognitive behavioral dysfunctions, learning disabilities, ADD/ADHD, and Parkinson's and Alzheimer's disease. Students will learn specific techniques to release brain-centered restrictions as well as the damaging effects that these restrictions cause.

Brain 1 (B1): Brain Tissue, Nuclei, Fluid & Autonomic Nervous System | Chikly Health Institute

Brain1 is an advanced class that use a slightly different paradigm by working extensively with the brain parenchyma, grey and white matter, cranial and spinal structures, rather than mainly concentrating on the cranial bones and membranes.

This work requires perceptual skills to be able to address tissue microstructures, and we will have specific exercises in the class to help build up these skills.

Cerebellum

This class will propose different ways to release these structures, and once learned, you will understand how these structures are repeatedly one of the most important, and yet least often addressed components of somatic dysfunctions.

Many topics will be covered in the Brain Therapy classes, in general, including:

- 1. Cranial bones (intraosseous and interosseous lesions) Claustrum
- 2. Cranial membranes in all anatomical directions
- 3. Fluid: 3 distinct compartments
 - a. Subarachnoid spaces and cerebral cisterns
 - b. Brain parenchyma and the glymphatic system
 - c. Ventricles
- 4. Grey Matter: 3 and 6 layered cortex and brain nuclei
- 5. White Matter: 3 types of organization
- 6. Electro-magnetic field (EMF) of the brain
- 7. Emotions, as well as mental or spiritual dimensions.

I know that the normal brain lives, thinks, and moves within its own specific membranous articular mechanism." - Sutherland WG, "The Cranial Bowl", Free Press, First Edition, 1939, reprint 1994, pp 51.

Class length 4 days

CEUs 24 hours for numerous professions
